

Estimate PFAS Liability Exposure

PFAS Liability as part of your Risk Mitigation Strategy

Well known for our market-leading transactional expertise in mergers and acquisitions, TRC is leading the way in evaluating liability associated with PFAS, per- and polyfluoroalkyl substances known to exhibit a persistent presence in the environment.

As your trusted advisor, we can strategically guide you through the challenging process of addressing PFAS contamination during due diligence, which the ASTM (American Society for Testing and Materials) proposed adding to the Environmental Due Diligence Standard E1527-13 as part of routine due diligence.

We can help you assess and quantify what your PFAS environmental liabilities are, both known and contingent, and we can help you understand the full range of your risk exposure when evaluating existing or future assets.

We are market experts in liability quantification and for over 20 years have worked with and helped insurance underwriters understand and accept risks associated with environmental liabilities. We think like a broker and have experience underwriting liability as part of our past third party liability transfer portfolio solutions. By learning how to assess liability horizons for ourselves, we now help our clients know their risk exposure and develop risk mitigation strategies.

We can conduct facility-specific and/or asset-wide assessments, including aqueous film forming foam usage and storage, as well as chemical handling and waste management, to identify site issues as the basis for statistical probability cost estimation that cover the full range of expected cost liability.

Technical and Regulatory PFAS Expertise

TRC's national team of dedicated PFAS experts are involved in PFAS R&D, PFAS media measurement and developed a PFAS forensics tool for source identification and differentiation. We work with industry trade groups, EPA and state environmental agencies on both technical and regulatory standards. TRC has a proprietary PFAS Reporting Tool that identifies current and historical chemicals and products that contain the 175 PFAS subject to Toxics Release Inventory reporting and the over 9,200 PFAS listed in the EPA's master list to expose potential PFAS liability consequences.

Don't let PFAS become a material issue that kills your deals. By doing asset inspections, Phase 2 investigations and liability cost modeling, we can determine the full liability exposure and give you the confidence, with a mitigation strategy and a negotiation tool, to move forward to close the deal.

About TRC

Groundbreaker. Game changer. Innovator. TRC is a global firm providing environmentally focused and digitally powered solutions that address local needs. For more than 50 years, we have set the bar for clients who require consulting, construction, engineering and management services, combining science with the latest technology to devise solutions that stand the test of time.

TRC's nearly 6,000 professionals serve a broad range of public and private clients, guiding complex projects from conception to completion to help solve the toughest challenges. We break through barriers for our clients and help them follow through for sustainable results.
